EASY TRIP

Distance counter

EASY TRIP is an equipment which measures the trip distance and the timing.

It has been designed for an easy use and answers to the Rally Raid request.

The equipment is delivered with its entire cable in armoured and non flammable Teflon wire including a waterproof zeroing remote button.

It has 2 red diodes readout of big size and superimposed. It is possible to regulate the diodes intensity:

- **at the top** : Reading of the TRIP N°1 used for the partial distance or TRIP N°2 which can be used into decreasing, calibration reading distance correction.
- **at the bottom** : Reading of the TRIP N°3 used for the global distance and the timing function.

Calibration according to the vehicle and the wheel size.

Works with an impulse sensor from 3 to 36 Volts type NPN (sensor OMRON NPN réf: TRIP 112)

Main features

Power supply: 12 V

Global and partial distance

2 red diodes readout

Remote control

Timing function

Weight : 350 grs

Dimensions (cm) :
L 18 X H 8.5 X P 3.7
