

Introducing the new Monit Q-Series.

**shown actual size*

The all new Monit Q-Series is the perfect balance of features and affordability for club competitors on a budget.

Overview.

The new Q-Series is designed to complement our existing TC100 and TC200 (T-Series) products, with the Q-Series aimed at club competitors, while the T-Series will continue to be aimed at professional teams. With the release of this new product, we now have a comprehensive product range that covers all styles of rallying, levels of competition, and budgets.

With its modern design, simple operation, and low cost we are confident that the new Q-Series will prove to be very popular among club competitors.

Sample User Interface Menus

Technology.

The Q-Series shares many of the key design features that have made our existing products so successful among professional teams.

Light-weight construction.

By using a tightly integrated design and modern electronics technology, the Q-Series is able to weigh in at an incredibly light 100 grams – less than 30% of the weight of many competing products. Its compact size makes it easy to fit into a vehicle, and the use of automotive grade components ensures it can survive the toughest rally stage, year after year.

Sunlight viewable display.

The new Q-Series uses the same high-contrast trans-reflective LCD as the T-Series to deliver exceptional clarity under all lighting conditions. Combined with a special anti-glare coating and integrated bright white LED backlight, this advanced display is easy to read under direct sunlight or in total darkness.

Intuitive graphical user interface.

The Q-Series is designed with a powerful graphical user interface that works just like a mobile-phone or MP3 player. Using the clear on-screen instructions, adjusting settings or performing an accurate calibration is simple and intuitive. The large graphics screen and menu based architecture removes the need for rows of complicated buttons, labelled with confusing abbreviations.

Model Range.

The Q-Series product range is comprised of two models, the Q-10 and Q-20.

Q-10

The Q-10 is an affordable entry level rally computer designed for value focused customers that only require basic features. The Q-10 has two accurate five-digit distance counters that can be cleared individually, adjusted, and calibrated for miles or kilometres. It is also ideal for classic events where a rally computer with speed measurement is not allowed.

Q-20

The Q-20 is designed to be a good balance of price and features for customers that are prepared to spend more if it is justified. The Q-20 has the same two accurate distance counters as the Q-10, but with the addition of current and average speed measurements. These features make the Q-20 ideal for regularity type events.

Features.

Feature	Q-10	Q-20
Total distance (5-digit)	x	x
Interval distance (5-digit)	x	x
Current speed		x
Average speed		x
Remote reset input	x	x
Operation in Miles or Kms.	x	x
Freeze Function	x	x
Adjustable Distances	x	x
Counting Up/Dn	x	x
Simple Calibration	x	x
